IN THE SPECIFICATION:

Please rewrite the paragraph at page 22, lines 11-15, so that it reads as follows:

The LED head 2 comprises: ~~the~~ an LED array 7 constructed by linearly arranging LED elements; ~~the~~ a driving section that comprises LED driver IC 6 for driving the LED array 7 in accordance with the print data or the like from the print controller 1; and ~~the~~ an EEPROM 8 in which correction data (or correction values) for correcting the drive output by the LED driver IC 6 is stored.

Please rewrite the paragraph at page 42, lines 15-18, so that it reads as follows:

When the decompressed correction data is supplied from the compressor/decompressor 10, the print controller 1 transmits the correction data to the external apparatus in step S24 and finishes the reading process.
